

The Duchesne **eco-ID™** program is more than just a slogan and a marketing strategy. In fact, Duchesne has always taken initiatives developing and introducing enduring eco-responsible practices. Our facilities and manufacturing processes are consistent with the ideals and practises of environmental preservation.

For the past several years, Duchesne has taken a stand and has committed towards the environment by adopting eco-responsible practices in its operations, by resorting to practices such as:

- *Manufacturing processes encouraging the recycling of our own generated waste*
- *Purchasing of recycled raw material to incorporate in the production of some products.*
- *The majority of the packaging that we are currently using is made from recycled material.*
- *Recycling of its waste water.*
- *Many steel colors are also satisfying the requirements for the cool roof systems, more eco-energetic.*

Originally, the **eco-ID™** program (ecologic ideas) was created to heighten the ecologic conscience of Duchene's employees and customers by eco-responsible practices valued by Duchesne for many years, but also to develop a solid eco-responsible spirit which will be the development basis of a new generation of products more eco-responsible.
